

The **NEW** way to control your security guards

The DigiTool™ Guard Patrol Clocking system is new and unique. It enables your security guards to be alert and register their visits to each checkpoint much

more quickly and easily than ever before. What's more the DigiTool™ provides you with fool-proof records of guarding performance, showing clearly if any checkpoint has been missed out. Now with new DigiTool™ there's no need to worry that your guards aren't doing the job you pay them to do. The paper print-out tells you everything in exact detail. And the DigiTool™ has proved immensely popular with the guards themselves, because the unit they carry is as lightweight and easy to use as a small pocket torch.

How the DigiTool™ system works

Each checkpoint on the guard's round is tagged with a small GA-01 "iButton". The iButton is a sealed stainless steel metal coded button that is attached to the asset or location that you wish your guard to visit on his patrol. The code is pre-programmed and is

virtually impossible to alter. It is not affected by dirt, grease or weather.

Your guard carries the DigiTool™ (data acquisition reader) which looks like a pocket torch and weighs just 225 grams. When he reaches

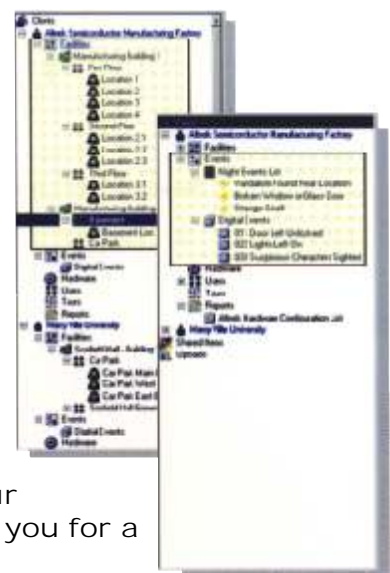

a checkpoint he simply touches the DigiTool™ to the iButton automatically recording the exact time, place and date. The DigiTool™ is encapsulated in a rugged, thick polycarbonate and special carbon hardened stainless steel and is waterproof. The DigiTool™ has an internal Lithium-Ion battery which can provide over 300,000 reads before a new recharge cycle. The acquired time stamped data resides in the internal non-volatile memory of the DigiTool™. The unit has an 8000 event memory.

The GC-02 DigiTool™ Base is a special desk-top or wall mountable docking station and battery charger for the GC-01 DigiTool™ reader. The RS-232 interface connects the "Base" to any PC running the Reports Light or the advanced Call Center remote monitoring software.

Getting the information to you

The information contained in the DigiTool™ is downloaded to either the Reports Light or the advanced Call Center remote monitoring software to generate reports and data analysis. The guard tour administration becomes a whole lot simpler and authentic with the DigiTool™ System. Now your guards cannot take you for a ride!
